

ABSTRACT

An apparatus for producing a thin film electrolyte is provided wherein a volatile lithium-
5 containing precursor and a volatile phosphate-containing precursor are mixed into a plasma
generated from a plasma source. The mixture is then deposited upon a substrate. The apparatus
has a plasma source (13) having a primary plenum (16) and a secondary plenum (23). The
primary plenum is in fluid communication with a source of nitrogen gas (47) and a source of
hydrogen gas (51). The secondary plenum is in fluid communication with a first bubbler (31) and
10 a second bubbler (38).
